# Dynamics 365 Sales

## Understanding the standard to challenge requirements better

Obernais – Day 1 - 13/10/2026

Rodrigue YENGO – MCT & MVP ARCHIA365

Product Owner / Business Analyst level · 2 days · ARCHIA365

# Two days, one common thread

ARCHIA365

## Day 1 · The standard and the sales process

| | |
|---|---|
| 9:00 | Opening and running case |
| 9:30 | M1 · Sales in the ecosystem |
| 10:45 | M2 · Configuration overview |
| 11:15 | M3 · Standard data model |
| 13:30 | M4 · Leads and conversion |
| 15:15 | M5 · Opportunities to invoices |
| 16:45 | Workshop 1 · Fit-gap |

## Day 2 · Customer relationship, management, ecosystem

| | |
|---|---|
| 9:00 | Day 2 kick-off |
| 9:15 | M6 · Interactions and relationship intelligence |
| 10:45 | M7 · Analytics and forecasting |
| 13:30 | M8 · Ecosystem and customisation |
| 15:00 | M9 · Good practices and case studies |
| 16:15 | Workshop 2 · Gap summary |
| 17:15 | Wrap-up |

# Day 2: Claire's Monday morning

1

## Where is Campus Lumière?

Module 6: interactions and relationship intelligence

2

## What is my quarter worth?

Module 7: analytics and forecasting

3

## Why still an Excel file?

Modules 8 and 9: ecosystem, good practices, decisions

# M6

## Interactions and relationship intelligence

Day 2 · 9:15-10:30 · Episode 6: three weeks of silence

Obernais - Day 1 - 14/10/2026
Rodrigue YENGO - MCT & MVP ARCHIA365

# Key terms: interactions and relationship intelligence

| English | French |
|---|---|
| **Activity** | Activité |
| **Timeline** | Chronologie |
| **Regarding** | Concernant |
| **Server-side synchronization** | Synchronisation côté serveur |
| **Dynamics 365 App for Outlook** | Complément Dynamics 365 pour Outlook |
| **Assistant (insight cards)** | Assistant (cartes d'insights) |
| **Copilot in Dynamics 365 Sales** | Copilot dans Dynamics 365 Sales |
| **Relationship analytics** | Analyse des relations |

?

**Question for the group**

Which of these terms do you use at Hager?

# Campus Lumière: what the timeline shows

26/10 to 16/11: no activity recorded; the follow-up task due 02/11 was not done

# Capture automatically rather than type

1

## Server-side sync

Exchange emails, appointments and tasks flow in without typing

2

## Outlook app

Track an email and link it to the opportunity

3

## Teams

Meetings and collaboration linked to records

4

## Timeline

All interactions in one place

**Privacy rules to define: what flows in, what stays private**

# The signals the CRM would have raised

## Included: assistant and Copilot

- Opportunity with no activity for 21 days
- Customer email with no reply
- Close date approaching
- Deal summary before the meeting

## Premium: relationship analytics

- Health of the relationship with Vitalis
- Key contacts and recent interactions
- A contact changing company
- Who knows whom at the customer

# Module 6 key message

Key message

## A CRM without emails cannot see weak signals

**! Watch out**

Relationship analytics is Premium, outside the Enterprise licence: present it as an option.

**PO Product Owner angle**

Prioritize automatic capture by channel (Diffuse, Project) before any analytics feature.

Exercise 6: estimate, channel by channel, the share of Hager customer exchanges that stay outside the CRM

# M7

## Data, analytics and forecasting

Day 2 · 10:45-12:30 · Episode 7: the Monday forecast

# Key terms: forecasting and KPIs

| English | French |
|---|---|
| **Forecasting** | Prévision |
| **Forecast category** | Catégorie de prévision |
| **Adjustment** | Ajustement |
| **Forecast history** | Historique de prévision |
| **Goals** | Objectifs |
| **Pipeline view** | Vue pipeline |
| **Premium forecasting** | Prévision prédictive |
| **Share of wallet** | Part de portefeuille |

?

**Question for the group**

Which of these terms do you already use at Hager, and in which tool?

# Native reporting, from daily work to management

1

## Views and charts

Opportunities by stage, owner, product family

2

## Pipeline view

Funnel and inline update of opportunities

3

## Goals

Target per salesperson and progress (Enterprise)

4

## Forecasting

Native (Enterprise): categories, adjustments; history through Power BI

5

## Premium forecasting

Premium: outside the Enterprise licence, an option

6

## Power BI

SAP data: margin, share of wallet, account plan

# How native forecasting works

1

**Hierarchy**

Claire, then Sophie, Julien, Karim

2

**Period**

Q4 2026

3

**Categories**

Pipeline, Best case, Committed, Omitted, Won

4

**Adjustments**

The manager corrects, with a comment

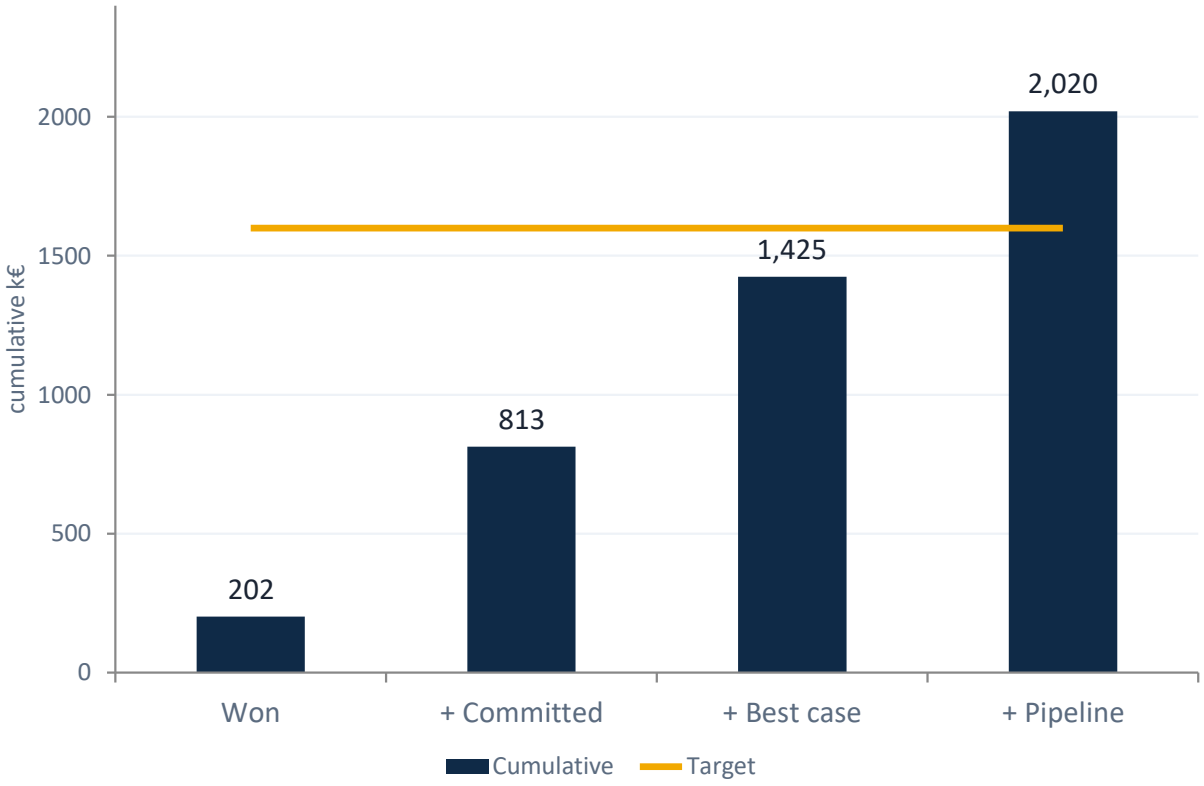

5

**History**

Export to Power BI

Forecasting reads opportunities directly: its reliability depends on the dates, amounts and categories entered

# South-East Q4: only 51% of target won or committed

Target: 1,600 k€

**Won + committed: 813 k€**

With best case: 1,425 k€ (89%)

Omitted, excluded: 150 k€

# Exercise: Claire's landing

1. Open the workbook, Pipeline sheet
2. Mark "Yes" for the deals you keep
3. Identify the 3 at-risk deals and propose the adjustment
4. Define 8 KPIs for sales management

Duration

**30 min + 30 min KPIs**

Output

Forecast_and_KPI_Exercise_Q4 workbook, participant version

# Eight commonly implemented KPIs

1. Lead conversion rate, by source
2. Win rate, by count and value
3. Sales cycle length, by segment
4. Weighted pipeline and target coverage
5. Forecast accuracy
6. Average discount granted
7. Opportunities without activity for 14 days
8. Share of project revenue with an identified specifier

**A reliable forecast depends on discipline with dates and amounts more than on the tool**

# Module 7 key message

Key message

## A reliable forecast depends on discipline with dates and amounts more than on the tool

### ! Watch out

Native forecasting and goals: in Enterprise. Premium forecasting: Premium, outside the licence

### PO Product Owner angle

For each KPI: channel (Diffuse or Project), tool (native or Power BI), source and owner

Compare your 8 KPIs with Hager's existing dashboards; lunch at 12:30

# M8

## Microsoft ecosystem and customisation

Day 2 · 13:30-14:45 · Episode 8: automating without developing

# Key terms: customisation and integration

| English | French |
|---|---|
| **Solution** | Solution |
| **Environment** | Environnement |
| **Business rule** | Règle métier |
| **Power Automate flow** | Flux Power Automate |
| **Companion app** | Application compagnon |
| **Copilot Studio agent** | Agent Copilot Studio |
| **Plug-in** | Plug-in |
| **Master data / source of truth** | Donnée maître / source de vérité |

?

**Question for the group**

Which of these terms do you hear in your discussions with Hager's technical team?

# Three response levels, three maintenance costs

1

## Configuration

Views, forms, business rules, business process flows

2

## Low-code

Power Automate, Power Apps, Copilot Studio

3

## Development

Plug-ins, custom integrations

**Low-code does not mean maintenance-free: every extension has an owner**

# Three requests, three answers

1

## Discount approval

Power Automate: above 18%, an approval card reaches Claire in Teams; her answer updates the quote

2

## Site visit

Power Apps: companion app with photos and report, on the existing Dataverse tables

3

## "Number of charge points"

Not needed: the data already exists in opportunity product quantities. The real need is a KPI

# Copilot, Teams and ERP: the other building blocks

## Collaboration and AI

- Teams channel linked to Campus Lumière
- Copilot in Sales: summaries, preparation
- Copilot Studio agent for installers

## Integrations

- SAP: accounts, projects, quotes, invoicing
- Eloqua: leads and contacts, source of truth?
- Lead App and event tool upstream

# Module 8 key message

Key message

## Choose the lowest response level that meets the real need, with an owner

### ! Watch out

Low-code does not mean maintenance-free; check the impact on SAP, Eloqua and the Lead App

### PO Product Owner angle

Rephrase each request as a need, then classify it: configuration, low-code or development

Exercise 8: classify 5 Hager backlog requests by level, owner and affected integration

# M9

## Good practices and case studies

Day 2 · 15:00-16:15 · Episode 9: three decisions for 2027

# Key terms: standard or custom

| English | French |
|---|---|
| **Out-of-the-box (OOTB)** | Standard (prêt à l'emploi) |
| **Configuration** | Paramétrage |
| **Customisation** | Personnalisation |
| **Fit-gap analysis** | Analyse d'écarts |
| **Technical debt** | Dette technique |
| **Backlog** | Carnet de produit |
| **Release wave** | Vague de mises à jour |
| **System of record** | Système de référence |

?

**Question for the group**

Which of these terms do you already use in internal discussions at Hager?

# Five common mistakes on Sales projects

ARCHIA365

1

**Replicating**

the old tool exactly

2

**One column**

per business request

3

**Business process flows**

that are too long

4

**Reference data**

with no owner

5

**Adoption**

neglected after go-live

# Decision tree: standard or custom?

1. **Is the need stated as a business problem?**
2. Does the standard cover it, even with another licence?
3. Can the process adapt to the standard?
4. Is configuration enough?
5. Is a low-code extension possible, with an owner?
6. Is development justified by the value?

# Three decisions for the executive committee

| Case | Today | Recommendation | Success factor |
|---|---|---|---|
| **"Project Web" table** | Custom table of project contributors | Standard stakeholders and connection roles | Data migration, support for project managers |
| **Excel quotes** | Built in Excel, re-entered by sales admin | Native quote; configuration tool only if pricing rules require it | Reliable catalogue and price lists |
| **Excel forecast** | Workbook consolidated every week | Native forecasting; Power BI for cross-functional analysis | Discipline with dates and amounts |

# The Product Owner's stance

## With the business

- Reframe the request as a problem
- Cost it fully: build and maintenance
- Decide on value

## With architects and integrators

- Rely on the architect for consistency
- On the integrator for feasibility
- Keep control of prioritisation

# Module 9 key message

Key message

## Every gap from the standard is a decision: problem, full cost, condition

### ! Watch out

Do not decide for Hager: Project Spider and Account Plan remain open questions

### PO Product Owner angle

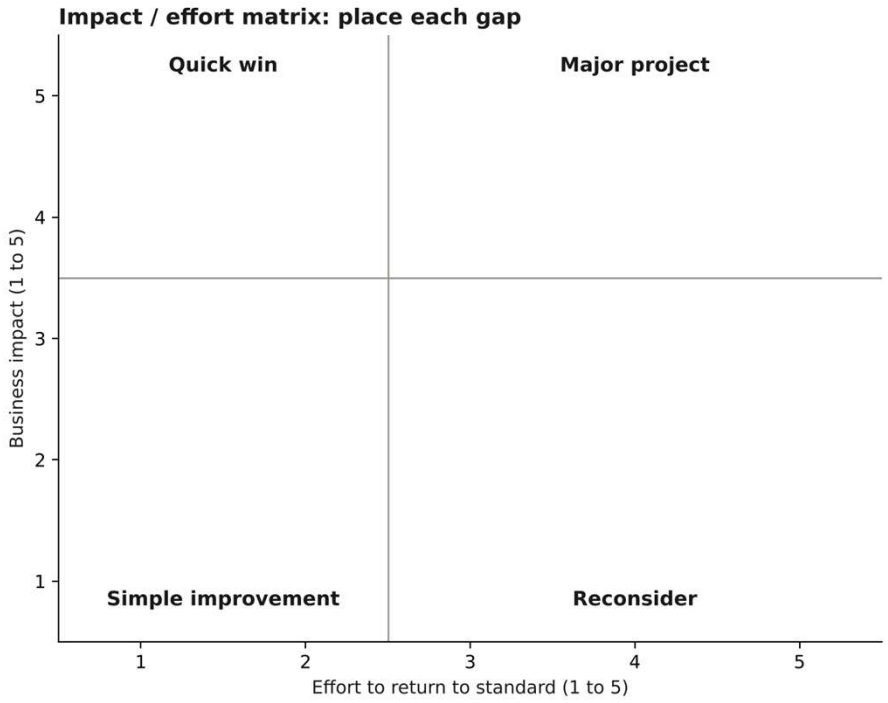

The PO stops as high up the tree as possible and keeps control of prioritisation

Transition: your exercise 9 sheets feed directly into workshop 2, which starts at 16:15

# Workshop 2: Hager gap summary

1. Consolidate gaps by channel: Diffuse, Project
2. Score each gap: business impact and effort, 1 to 5
3. Place them on the matrix, then dot-vote
4. Keep 3 to 5 ideas, with benefit and conditions

**Duration: 60 min, whole group**

# Wrap-up

**Staying close to the standard means choosing where to invest your difference**

Your first action: write it in the workbook, then share it with the group

# Thank you

Post-course quiz and satisfaction survey
